

User Manual

Platform-CRM is a pay-per-call / call-forwarding CRM. Your team records the daily call volumes for **buyers** (the revenue side — calls sold and forwarded to customers) and **campaigns** (the cost side — the media buying that sources those calls). The gap between the two is your **profit**. This guide walks through every page and the controls you'll use daily.

8 working pages

Revenue & cost tracking

Live dashboard

CSV / PDF reports

Key concepts

A few terms recur across every page. Understanding them makes the whole app read at a glance.

TERM	WHAT IT MEANS
Buyer	A customer who <i>buys</i> forwarded calls from you — the revenue side. Buyers have a short code such as <code>RTG 04</code> or <code>L48</code> .
Campaign	A media-buying campaign that <i>sources</i> calls — the cost side. Campaigns have codes like <code>C-05</code> and a traffic destination / source such as <code>XXD</code> .
Answered / Missed	Calls that connected vs. calls that rang out, for a single day and destination.
Counted	The billable number of calls for that row (answered plus any counted replacements).
Rate	The price per counted call, in dollars.
Total bill	Calculated automatically as <code>Counted × Rate</code> . You never type this — it updates as you edit.
Profit / Margin	Revenue (from buyers) minus Cost (from campaigns). A negative number is shown in red .

The golden rule

Everything you enter lives on the **Daily Sheet** (revenue) and the **Campaigns** sheet (cost). The Dashboard, Buyers, and Complete Report pages are all *views* that summarise those two sheets — you rarely edit them directly.

Getting around

The dark sidebar on the left is always visible on desktop. It's how you move between pages; the highlighted item is the page you're on. On a phone, tap the  menu icon in the top bar to open it.

The eight pages

Dashboard — the at-a-glance performance overview.

Daily Sheet — enter and review buyer (revenue) call records.

Buyers — a per-buyer monthly summary with editable rates.

Campaigns — enter and review campaign (cost) call records.

Vendors — per-traffic-source payment ledgers.

Portal Expenses — monthly provider expense sheet.

Complete Report — revenue, cost and profit side by side.

Attendance — team check-in / check-out tracking.

Reading a page

Every page opens with a **title** and short subtitle at the top-left, and its main **controls** (date range, search, filters) at the top-right.

Money is shown in dollars; large counts use thousands separators. Positive changes are **green**, drops are **red**.

Shared controls

The date-range picker

Most pages carry a date-range button at the top-right (for example [2026-04-13 ~ 2026-07-11](#)). Every figure on the page is calculated *for that period*, so this is the single most important control in the app.

- 1 Click the date button to open the picker.
- 2 Pick a quick **preset** — Today, Yesterday, Last 7 / 30 / 90 days, or This month — or click two days on the calendar for a custom span.
- 3 Press **Apply**. The whole page reloads for the new period.

Searching, filtering & sorting

On the sheet pages you can type in the **Search** box to match a buyer or campaign code, use the **destination / campaign** dropdown to narrow to one entity, and click a **column header** to sort. Long lists are paged 35 rows at a time.

Editing data

Data is edited **inline**. On the Daily Sheet and Campaigns sheet each row has a **pencil** (edit) and **trash** (delete) button. On the Buyers sheet you edit the buyer code and rate directly in the cell; totals recalculate instantly.

Dashboard

The landing page. It answers "how are we doing this period?" in one screen — headline numbers up top, trends and rankings below. Change the date range to re-scope everything.

The Dashboard, scoped to the last 90 days of sample data.

- 1 **Navigation sidebar** — jump to any page; the current page is highlighted.
- 2 **Date range** — sets the reporting period for every card and chart on the page.
- 3 **KPI cards** — Revenue (billed), Running Fee, Profit and Counted Calls, plus Answer Rate, Profit Margin, Active Buyers and Active Campaigns. Each headline shows the change *vs. the previous period*.

- 4 **Revenue, running fee & profit over time** — the income trend. Toggle **Daily / 4 Days / Weekly** at the top-right to change the grouping.
- 5 **Most active buyers** — your buyers ranked by revenue for the period.
- 6 **Answered vs missed calls** — call-quality trend on the buyer side; a healthy chart hugs the top (answered) line.
- 7 **Top traffic sources** — campaign spend broken down by traffic source.

Reading the KPIs

A red **Profit** or negative **Profit Margin** means cost outran revenue for the selected window — open the [Complete Report](#) to see exactly which destinations drove it.

Daily Sheet

Your day-to-day workhorse for the **revenue** side. Each row is one destination's calls for one day. The **Total** column and the navy totals bar update automatically from Counted $\times$ Rate.

The Daily Sheet — buyer call records for the selected period.

- 1 **Search** — filter rows by destination code (e.g. type **RTG**).
- 2 **Date** — the reporting period, shared with the rest of the app.
- 3 **Destination** — narrow the sheet to a single destination, or leave on *All destinations*.
- 4 **Column headers** — Date, Destination, Answered, Missed, Replacement, Counted, Rate, Total. Click a header (e.g. **Rate** ↓) to sort by it.
- 5 **Row actions** — the **pencil** edits a record; the **trash** deletes it (with a confirm).
- 6 **Totals & pagination** — the navy **TOTAL** bar sums the filtered set; use **Prev / Next** to page through 35 rows at a time.

Entering a day's numbers

Add or correct records inline on the sheet, then move on — the buyer's Total and every summary that references it (Dashboard, Buyers, Complete Report) update the next time you open them.

Buyers

A rolled-up **monthly sheet**, one row per buyer, for the selected date range. It's the quickest way to see how much each customer bought and to keep their **rate** current.

Buyers — per-buyer totals with inline-editable rates.

COLUMN	MEANING
Buyers	The buyer code. Editable — rename a buyer inline.
Total Calls Bought	Auto-summed from the Daily Sheet for the chosen date range.
Average Calls a Day	Total calls divided by the active days in the period.
Rates	Price per call. Editable — click the cell and type a new value.

COLUMN	MEANING
Amount Received	Calculated automatically (calls × rate).

Where do new buyers come from?

A buyer appears here automatically the first time its code is used on the Daily Sheet – there's no separate "add buyer" step. Use the **Search by name** box to find one quickly.

Campaigns

The mirror image of the Daily Sheet, for the **cost** side. Each row is a campaign's calls for one day at a given traffic destination. This is where your media-buying spend is recorded.

Campaigns – campaign call records (the cost / billing sheet).

The controls match the Daily Sheet: **Search** by campaign code, a **Date** range, a **Campaign** dropdown, sortable headers, per-row edit / delete, a navy **TOTAL** bar and paging. The extra **Destination** column names the traffic source the campaign was buying.

Revenue vs. cost at a glance

Daily Sheet totals are your money *in*; Campaigns totals are your money *out*. The [Complete Report](#) subtracts one from the other for you.

Vendors

A running **payment ledger for each traffic source**. The page opens with one **tab per traffic source** — the same sources you buy on the [Campaigns](#) sheet (e.g. [DXTST](#) , [RGR](#)) — so you can track, per vendor, how many calls converted, what that comes to, and how much has actually been paid.

Vendors — the DXTST tab: a dated ledger with auto Payments, an Average calls a day, and the colour-coded Due / Advance balance.

Tabs & the shared date filter

Click a tab along the top to switch vendors. The **+** tab adds a vendor that isn't in Campaigns — type its name and it behaves exactly like the rest. One **date-range picker** at the top-right applies to *every* tab at once: change it and each vendor's rows and totals re-scope to that period.

COLUMN	MEANING
Date	The day the entry is for — one row per day you record.
Traffic Source	Filled in for you — always the current tab's vendor.

COLUMN	MEANING
Converted call	How many calls converted that day. You type this.
Price (Usd)	Price per converted call, in dollars. You type this; new rows pre-fill the last price used.
Payments	Calculated automatically as <code>Converted call × Price</code> . You never type this.
Amount paid	How much has actually been paid for that day. You type this.

Adding & editing rows

- 1 On the bottom (blank) row, set the **Date**, then type the **Converted call** count, the **Price**, and any **Amount paid**.
- 2 Press **Enter** or click the **+** at the end of the row to save it.
- 3 Edit any saved row in place — changes save when you click away; the **trash** icon removes a row.

The figures below the sheet

Average Calls a Day

Total converted calls ÷ the number of **weekdays** (Mon–Fri) in the selected date range — calculated for you.

Amount Due / Advance

A balance **you type in** for the vendor. Pick **Due** (they owe you — shown red) or **Advance** (paid ahead — shown green) and enter the amount. It starts at 0.

Payments vs. Amount paid

Payments is what the calls come to (calls × price); **Amount paid** is what has actually been settled. The navy **Total** bar sums Converted calls, Payments and Amount paid for the period.

Portal Expenses

A **monthly expense sheet**, one row per provider, for what you spend running the calling portals. Pick a month with the selector at the top-right; the sheet and its charts are for that month.

Portal Expenses — the monthly sheet, per-metric provider charts and the month's Total Expenses band.

COLUMN	MEANING
Name	The provider / expense line. Type to add or rename.
Voice Minutes · Rejected calls · Rent values · Payout expenses	The component amounts that make up the bill. You type each.
Total Amount (Usd)	Defaults to the sum of the four components, but you can override it for a flat fee.
% of Total	That row's share of the month's grand total — calculated for you.

Rows auto-save when you click away, and the bottom row adds a new provider. Below the sheet, a per-metric chart panel compares providers and a navy band shows the month's **Total Expenses**.

Auto total, with an override

Leave **Total Amount** alone and it tracks the four component columns; type a value to pin a flat amount (e.g. a fixed fee) independent of them.

Complete Report

The bottom line. Three stacked sections for the selected period: **Revenue** by buyer destination, **Cost** by campaign destination, and a **Complete** summary that does the subtraction.

Complete Report — revenue and cost combined into profit.

Read it top to bottom, following the three labelled bands on the page:

SECTION	WHAT IT SHOWS
REVENUE buyer destinations	Every buyer's answered, missed, counted and total bill, ending in a navy total row.
COST campaign destinations	The same breakdown for your campaigns — money spent to source the calls.
COMPLETE revenue - cost = profit	Three summary cards. When cost exceeds revenue the Profit card turns red and shows a negative figure.

Use the date range at the top-right to run the report for any month, quarter or custom window.

Attendance

Tracks team **check-in / check-out**, fed by a Telegram bot. Staff clock in and out from Telegram; this page turns that into daily rosters and per-member reports.

Attendance — the Daily Roster tab with its summary cards.

Three tabs

Daily Roster

Who's online now, plus cards for **Present Today**, **Still Checked In**, **Avg Hours Worked**, **Absent** and **Break Overages**, and a searchable table of the day's check-ins.

Staff Summary & Reports

Per-member hours over a period, with **XLSX** and **PDF** export buttons for a team sheet, an all-members report, or a single member's daily breakdown.

Needs the attendance service

Attendance data is supplied by the external Telegram check-in bot. On an install where that bot and its tables aren't set up yet, the roster reads *"Nobody checked in yet today"* and the counts stay at zero — the check-in and summary features light up once the bot is connected.

Accounts & access (optional)

Platform-CRM can run fully open (no login) or with authentication switched on. When it's enabled you sign in with your email and a 6-digit code from the **Google Authenticator** app — there's no password to remember or leak.

Signing in

Enter your email, then the current 6-digit code from your authenticator app. First-time users scan a QR enrolment link an admin sends them.

Admin extras

Admins get two more sidebar items — **Users** (create accounts, set per-page access, reset authenticators) and **System Logs** (a searchable audit trail of who did what).

These items only appear when authentication is enabled and you have the rights to see them. If you don't see **Users** or **System Logs**, your install is either open or your account isn't an admin — that's expected.

Tips & FAQ

My numbers look tiny / empty

Almost always the **date range**. The default window can be a single quiet day — widen it (try **Last 90 days**) and the charts and totals fill in.

I changed a rate but the Dashboard didn't move

Summary pages load their figures when you open them. Revisit the Dashboard or Complete Report after an edit and it will reflect the new numbers.

A total looks wrong

Totals are always $\text{Counted} \times \text{Rate}$ summed across the *filtered* rows. Check that your search box and destination filter aren't hiding rows, and that the date range is what you expect.

How do I remove a record?

On the Daily Sheet or Campaigns sheet, click the **trash** icon at the end of the row and confirm.

Platform-CRM User Manual · Screens captured from sample data on 11 Jul 2026.

A pay-per-call / call-forwarding CRM — Dashboard, Daily Sheet, Buyers, Campaigns, Vendors, Portal Expenses, Complete Report & Attendance.
